The drawing exchange format (DXF) is a drawing format developed by Autodesk. Originally introduced in AutoCAD version 2.1, it allows reading and writing of the format within AutoCAD itself, or importing and exporting from other programs such as Windows applications, CAD programs and web-based applications. The drawing exchange format can contain information such as layers, linetypes, drawing elements, text, style information, and geometric information, such as dimension and annotation data. 3D modelling tools The 3D Warehouse allows users to search, download and customize 3D models. Autodesk® 360 Industrial Design® is a cloud-based design tool which integrates 3D models with applications such as AutoCAD® and Microsoft® Excel. Awards and certification AutoCAD has won numerous awards for its products, including many in the Computer-Aided Design industry. Certifications The original version of AutoCAD was certified by ANSI-Accredited certifier American Society for Testing and Materials (ASTM) in 1986. In 1993, the R & D division of Autodesk introduced its current certification program. The certification program has been expanded to include many Autodesk products, but AutoCAD is the

only CAD product to receive both US and international certification. AutoCAD Certifications are divided into two categories: Certified and Not Certified. I have a network unavailable page which looks like this: I would like to put up a pop-up dialog telling the user the network is not available and asking them to go back to my main page when they click OK. Is this possible? A: Put a UIViewController in front of the UIWebView, and make it have some title and other view properties set. In the UIViewController's viewDidLoad, add the following to make it do what you want: - (void)viewDidLoad { [super viewDidLoad]; NSString *msg = @"You should go back."; UIAlertView *alert = [[UIAlertView alloc] initWithTitle:@"Network Unavailable" message:msg delegate:nil cancelButtonTitle:@"Ok" otherButtonTitles:nil, nil]; [alert show]; // etc. } The code for the alert can be much more complicated, but this should get you started. A: No it's not possible, the UIWebView would have to respond to a network connection call. You might be able to simulate a network connection (perhaps send an http request) on a separate thread and act on the results. That may work for some

What's New In AutoCAD?

Review your changes interactively, in context, in AutoCAD, in real-time. The changes will be displayed in the same context as you import them. You can review and edit in AutoCAD as you are making design changes in the 3D model. (video: 1:27 min.) Ease creation and use of multiscale objects. Multiscale objects let you do more with just one drawing. You can create complex drawings that contain many objects, but with fewer files than you'd have if you had to create each scale individually. (video: 1:13 min.) Experimental feature to speed up experimentation with components. The layout of the component architecture (ARC, for "Arc of Components") lets you explore quickly by saving your sketch state and automatically displaying the final component on the screen. You can also automatically generate the component architecture, based on your sketches. (video: 1:35 min.) Sketch Stream : Efficiently edit and navigate large drawings with a simple tool. Edit geometry with a special "paper space" tool and use your own graphic tablet and stylus for precise control of your design. (video: 1:29 min.) Detect sketch interactions in live, interactive dimensions. Your dimension tool has a "Sketch Detect" feature to interact with sketch objects in your drawings. When you draw a line, indicate the end point of the line with a sketch point, such as the end of a hole, and AutoCAD will display the object with the sketch on the screen. (video: 1:15 min.) Comprehensive native parametric output options. Output options for animations and solids are more powerful and easier to use than before, and now let you export AutoCAD-specific files. (video: 1:31 min.) Enhanced user interface : Added a resizable toolbox, which is easier to navigate. The toolbox is contained within a floating window that can resize to be as large as you want. It's organized by category, to make the toolbox easier to navigate. The toolbox is separate from the drawing window, which helps you work more efficiently when you use multiple windows. (video: 1:02 min.) Simplified ribbon commands. The ribbon contains all of the tools you use most often, and they're all easier to find. The ribbon◆
