What's New In?

zpEditor is a simple, easy to use archive manager. This app is capable to create.zpk archives by adding files and folders to the archives, and to instantly extract the contents of those archives. It can also display the contents of archives as well. zpEditor is a lightweight tool and it does not need much RAM to run. However, it does not support big archives and it is limited to.zpk archives. Changelog: v1.0 * Initial release The present invention is directed to power-operated devices and, more particularly, to a housing for an electrically-operated power tool. An electrically-operated power tool is commonly used in a variety of construction, maintenance, and repair applications. A power tool typically includes a housing having a handle that is gripped by a user to hold the tool. A rotatable power tool having a motor that is mounted to the housing for rotation relative to the housing about a first axis of rotation is provided. The motor also has a head that is mounted to the housing for rotation about a second axis of rotation that is generally perpendicular to the first axis of rotation. An output device, such as a drill bit, a driver bit, a screwdriver bit, a grinder, or the like, is coupled to the head for rotation therewith. A power source provides an electric current to the motor to cause rotation thereof in a particular direction, such as clockwise or counterclockwise. The head is then used to perform a particular operation, such as drilling or driving a fastener. One type of power tool is a cordless tool that does not require a connection to a separate power source, such as an AC or DC power outlet. A rechargeable battery is provided within the housing and is removably coupled to a battery charger. The battery is recharged by the battery charger through the use of the electric current provided by the battery charger. The rechargeable battery is contained in a battery compartment within the housing. The battery charger is provided in a battery charger compartment within the housing. A problem with many power tools is that the battery charger compartment is a separate structure from the remainder of the housing. This increases the size and weight of the power tool. Another problem with many power tools is that the battery charger is exposed when the battery charger compartment is opened, and can be easily damaged. This problem is particularly problematic with cordless power tools having a battery charger compartment that is pivotally coupled to the housing. The battery charger can be damaged if it is caught on an object when the battery charger compartment is opened. Therefore, there is a need for a housing for an electrically-operated power tool that is easy to use, and that reduces the size and weight of the power tool. There is also a need for a housing for an electrically-operated power tool that protects the battery charger.The effect of urinary tract obstruction on the circulation
